The findings of this study (Johnson, 1986) further support the view that shared knowledge and understanding are crucial for successful group work. It highlights the importance of effective communication and collaboration among group members, which facilitates the development of a shared understanding and the achievement of common goals.

The study also underscores the significance of fostering an environment where members feel valued and respected. This can be achieved by creating opportunities for open and honest discussions, where individuals feel free to express their ideas and concerns without fear of judgment.

In conclusion, the findings of this study emphasize the need for educators and practitioners to recognize the importance of shared knowledge and understanding in group settings. By promoting effective communication and collaboration, and creating an inclusive environment, we can enhance the effectiveness of group efforts and achieve greater success.
